

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application .

Listing of Claims:

1. (Currently Amended) A method of enabling access to a data structure having a plurality of sections, said method comprising the steps of:

~~associating addresses~~designating-identification of users with respective sections of the data structure wherein each of the respective sections is comprised of a plurality of independently accessible storage areas;

~~granting access rights for each of the users to access the sections corresponding to the associated addresses of the respective users by: 1) permitting said access to each of the users responsive to the associated addresses of the users with the respective sections of the data structure and 2) preventing any of said users from having access to any of said sections which have not been associated with the address of said any of said users, wherein the sections of the data structure exist and include data prior to said access rights being granted; and~~

enabling each of the users ~~to access to~~ the storage areas in the respective sections of the data structure ~~associated with~~designated-by each users' respective ~~address~~identification, ~~after said access rights are granted~~said access-permitted to each of the users-responsive to the ~~designating-identification of the users with the respective sections of the data structures; and~~

~~preventing any of said users from having access to any of said sections which have not been designated with identification of said any of said users.~~

2. (Currently Amended) The method of claim 1 wherein said step of ~~associating~~designating includes entering the ~~addresses~~identification into respective linking sections of the data structure, each of the linking sections being associated with a portion of the sections of the data structure.

3. (Currently Amended) The method of claim 1 wherein said step of ~~associating~~designating includes associating the ~~addresses~~identification to the respective sections of the data structure from another data structure.

4. (Currently Amended) The method of claim 1 further comprising the step of:

sending an e-mail to one of the users alerting the user of the user's ability to access the sections of the data structure associated with the user's addressidentification.

5. (Currently Amended) The method of claim 1 further comprising the step of:

creating, by one of the users, a password, to limit access to the sections of the data structure associated with the one user's addressidentification to the one user and other users having access rights to the sections of the data structure associated with the one user's addressidentification.

6. (Currently Amended) The method of claim 1 further comprising the step of:

reassigning, by one of the users, said access rights to at least a portion of the sections of the data structure associated with the one user's addressidentification to another user.

7. (Currently Amended) The method of claim 1 wherein said step of enabling includes enabling at least one of editing the respective sections by users corresponding to the associated addressesdesignated-identification, and viewing the respective sections by users corresponding to the associated addressesdesignated-identification.

8. (Currently Amended) The method of claim 1 wherein said step of associatingdesignating includes associating the addressesdesignating-identification of the users with respective data cells of a spreadsheet included in the data structure.

9. (Currently Amended) The method of claim 1 wherein said step of associatingdesignating includes selecting at least one section in the data structure and entering the respective addressan-identification into a linking section of the data structure to link the at least one selected section with athe user associated with the entered addressidentification, and said step of enabling includes enabling access to the at least one selected section to the user associated with the entered addressidentification.

10. (Currently Amended) The method of claim 9 wherein said step of selecting included in said step of associatingdesignating includes selecting the at least one section as a data cell in a spreadsheet, and said step of enabling includes enabling access to the data cell to the user associated with the entered addressidentification.

11. (Original) The method of claim 10 wherein said step of selecting includes at least one of highlighting the data cell and clicking on the data cell.

12. (Currently Amended) A method of accessing a data structure, said method comprising the steps of:

receiving authorization, by a user, to access at least a portion of a plurality of sections included in the data structure, the authorization being provided by associating an address designating an identification of the user with the portion of the sections in the data structure, wherein each of the sections is comprised of a plurality of independently accessible storage areas;

granting access rights for the user to access the portion of the sections of the data structure responsive to the received authorization by: 1) permitting said access to the user responsive to the associated address of the user with the portion of the sections of the data structure and 2) preventing users other than the user from having access to any of said sections which have not been associated with the address of said any of said users, wherein the sections of the data structure exist and include data prior to said access rights being granted; and

enabling the user to access the portion of the sections of the data structure associated with the address of said user, after said access rights are granted based on the received authorization; and

preventing users other than the user from having access to any of said sections which have not been designated with identification of said any of said users.

13. (Original) The method of claim 12 further comprising the step of:

receiving, by the user, an e-mail alerting the user of the user's ability to access the portion of the sections.

14. (Currently Amended) The method of claim 12 further comprising the step of:

creating, by the user, a password, to limit access to the portion of the sections of the data structure to the user and said other users having said access rights to the portion of the sections of the data structure.

15. (Currently Amended) The method of claim 12 further comprising the step of:

reassigning, by the user, said access rights to at least a portion of the portion of sections to another of said other users.

16. (Original) The method of claim 12 wherein said step of receiving includes at least one of receiving authorization to edit the portion of the sections, and receiving authorization to view the portion of the sections.

17. (Original) The method of claim 12 wherein said step of accessing includes accessing the portion of the sections as data cells in a spreadsheet.

18. (Currently Amended) A computer readable storage medium including software that is adapted to control a computer to implement a processing method of enabling access to a data structure having a plurality of sections, said processing method comprising the steps of:

~~associating addresses~~designating identification of users with respective sections of the data structure, wherein each of the respective sections is comprised of a plurality of independently accessible storage areas;

granting access rights for each of the users to access the sections corresponding to the associated addresses of the respective users by: 1) permitting said access to each of the users responsive to the associated addresses of the users with the respective sections of the data structure and 2) preventing any of said users from having access to any of said sections which have not been associated with the address of said any of said users, wherein the sections of the data structure exist and include data prior to said access rights being granted; and

enabling each of the users ~~to access to~~ the storage areas in the respective sections of the data structure ~~associated with~~designated by each users' respective ~~address~~identification, ~~after said access rights are granted~~permitted to each of the users responsive to the designating identification of the users with the respective sections of the data structures; and

~~preventing any of said users from having access to any of said sections which have not been designated with identification of said any of said users.~~

19. (Currently Amended) A method of enabling access to a data structure, said method comprising the steps of:

associating a first cell with a first section of the data structure comprised of independently accessible storage areas;

associating a second cell with a second section of the data structure;

associating a first address of a first user with the first cell;

associating a second address of a second user with the second cell;

granting first access rights for the first user to access the first section of the data structure by: 1) permitting said access to the first user responsive to the first address associated with the first section of the data structure and 2) preventing the second user from accessing data in the first section;

granting second access rights for the second user to access the second section of the data structure by: 1) permitting said access to the second user responsive to the second address associated with the second section of the data structure and 2) preventing the first user from accessing data in the second section, wherein the first and second sections of the data structure exist and include respective data prior to said first and second access rights being granted;

enabling thea first user to view data contained in only the first section of the data structure by entering a first identification associated with the first addressuser in the first cell, after said first access rights are granted; and

enabling thea second user to view data contained in only the second section of the data structure by entering a second identification associated with the second addressuser in the second cell, after said second access rights are granted; and

preventing the first user from accessing data in the second section; and

preventing the second user from accessing data in the first section.
